

Solution Summary | Government | Civil and Criminal Courts Solutions

Make critical decisions with the most accurate information

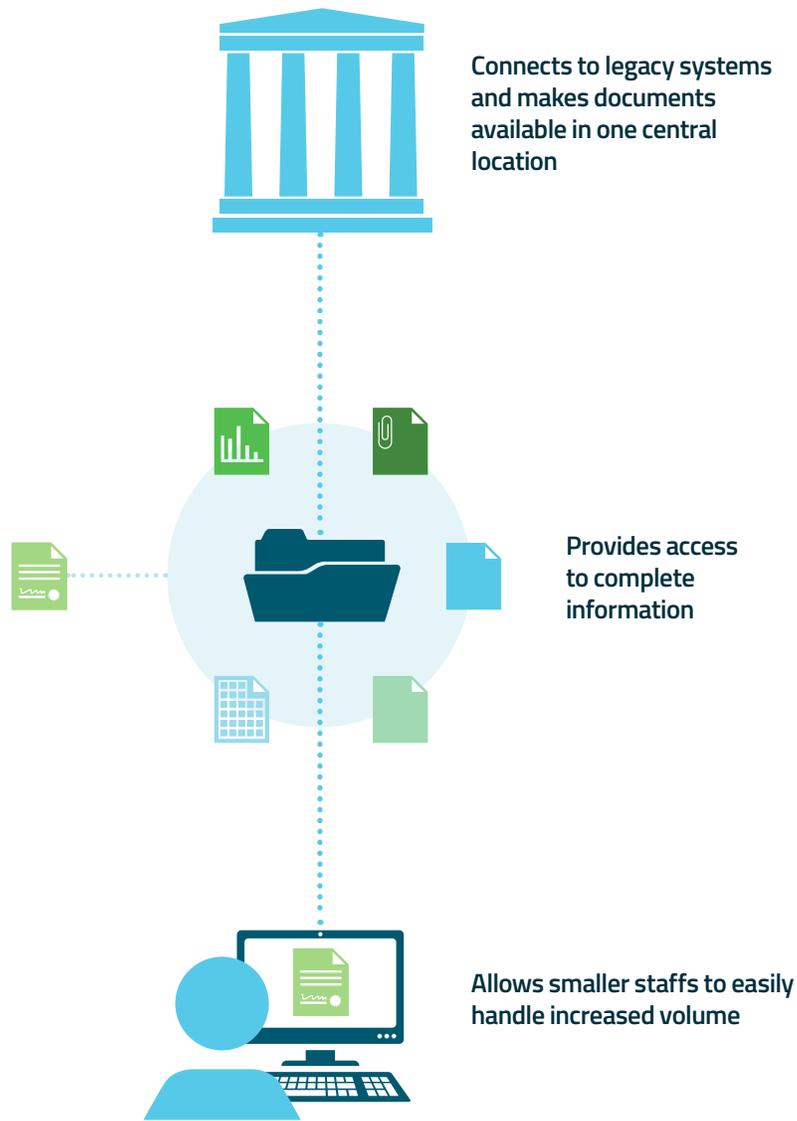

Connects you to the information you need

Provides complete information when decisions need to be made

Lets you handle more cases with fewer staff members

Extends the value of existing systems without custom coding

Civil and criminal courts need access to critical documents that are scattered among file rooms, computer networks, email systems and line-of-business applications. Insufficient documentation drags out case proceedings and increases risk of a mistrial. With caseloads growing and staff budgets shrinking, manual processes make discovery and decision-making even slower and more expensive.

Connects you to the information you need

OnBase document management solutions for civil and criminal courts automate the low-value processes that take up excessive time and resources. First, OnBase connects legacy systems and eliminates duplicate data entry. Then, it captures documents from multiple sources and uses data from those systems to index the documents. This makes documents available to anyone who needs them via Web-based folders or even from the green screens of a case management system.

So without replacing your legacy systems, or making radical changes to the way you do business, you have all case documentation in one central location. And staff can access it when and where they need it most.

Provides complete information when decisions need to be made

The data and documents that support court proceedings come from many places – including the police department, prosecutors office and social service agencies, just to name a few. Each has its own way of processing documents and storing data, and its own way of providing that information to you. This is not going to change.

What can change is the way your court manages it. There is no need to get bogged down by the paperwork. OnBase pulls in the documents and data you need and makes them available through text-searchable electronic folders. Now you are certain that you have access to every bit of information pertinent to your case to confidently make tough decisions.

Lets you handle more cases with fewer staff members

By eliminating manual, paper-based tasks, OnBase allows courts to do more with less. By sharing data between systems, clerks input more cases with less data entry. With all information present, court proceedings stay on schedule, eliminating the costs of rescheduling and the possibility of mistrial. With all available information at their fingertips, judges make the best decisions quicker, and with less risk.

Extends the value of existing systems without custom coding

OnBase not only shares data between systems, it also allows you to extend the useful life of your legacy systems. By connecting unstructured documents like evidence or pleadings with structured data from the court, prosecutor case management systems (CMS), or police records management systems (RMS), court processes go smoother and faster. You're also using less taxpayer dollars.

OnBase solutions work the way you need to work, bridging any gaps your organization has in process efficiency. You always have the information you need, when you need it.
